# WORLDWIDE ENERGY CONSUMPTION BY FUEL TYPE IN 2023

Source: Energy Institute

Oil continues to be the dominant fuel type in the world, now representing 32% of energy consumption in 2023, an increase of 1% compared to 2022. Renewables' consumption has also increased by 1% worldwide and by 2% in the European Union.

**Note:** Please note that due to rounding, figures may not add up exactly to 100%.
