

# DECLINING EU SHARE IN GLOBAL CO<sub>2</sub> EMISSIONS

Source: International Energy Agency

In 2023, the EU accounted for 7% of the total CO<sub>2</sub> emissions and this share is expected to drop to 3% in 2050. CO<sub>2</sub> emissions in North America and China are also forecasted to decrease by 2050 by respectively 5 and 9 points, whereas in other parts of the world, emissions are likely to increase.
