AVERAGE AGE OF THE EU-27 TRUCK FLEETS IN 2023

Source: European Automobile Manufacturers' Association

In 2023, the average age of trucks slightly increased across most European countries, with Greece reporting the oldest fleet at 22.6 years, and Austria and Luxembourg the newest at 6.8 and 7.5 years, respectively. Due to financial constraints, companies in Eastern and Southern Europe often rely on second-hand trucks, resulting in longer vehicle use and a greater need for decarbonisation strategies.
