

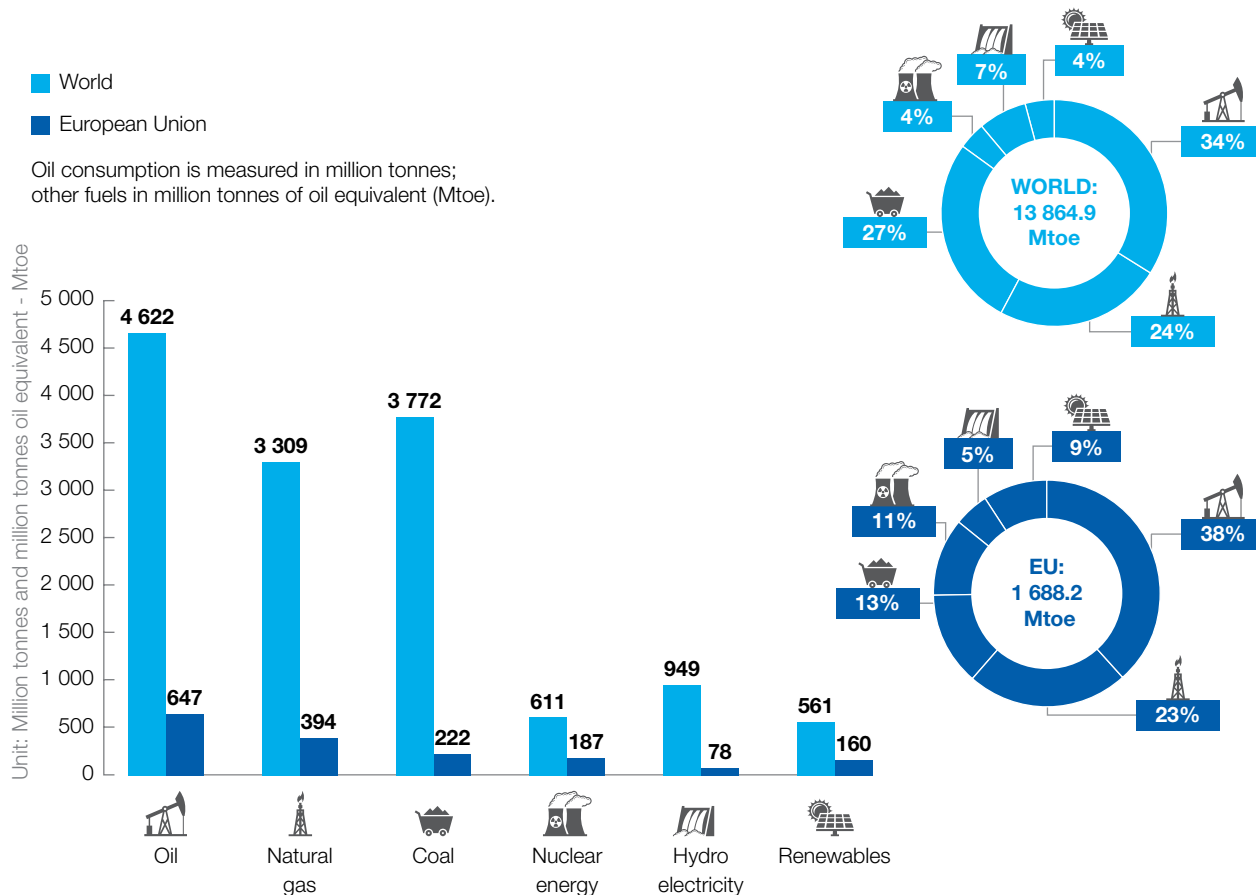

FIG.10 WORLDWIDE ENERGY CONSUMPTION BY FUEL TYPE IN 2018

Source: BP Statistical Review of World Energy 2019

Oil remains the world's dominant fuel making up just over a third of all energy consumed. In 2018 oil and coal's market share decreased marginally. Natural gas slightly increased to a new high of 24%, while renewable energy accounted for 4% of the world's energy consumption.

Note: Please note that due to rounding, figures may not add up exactly to 100%.
