

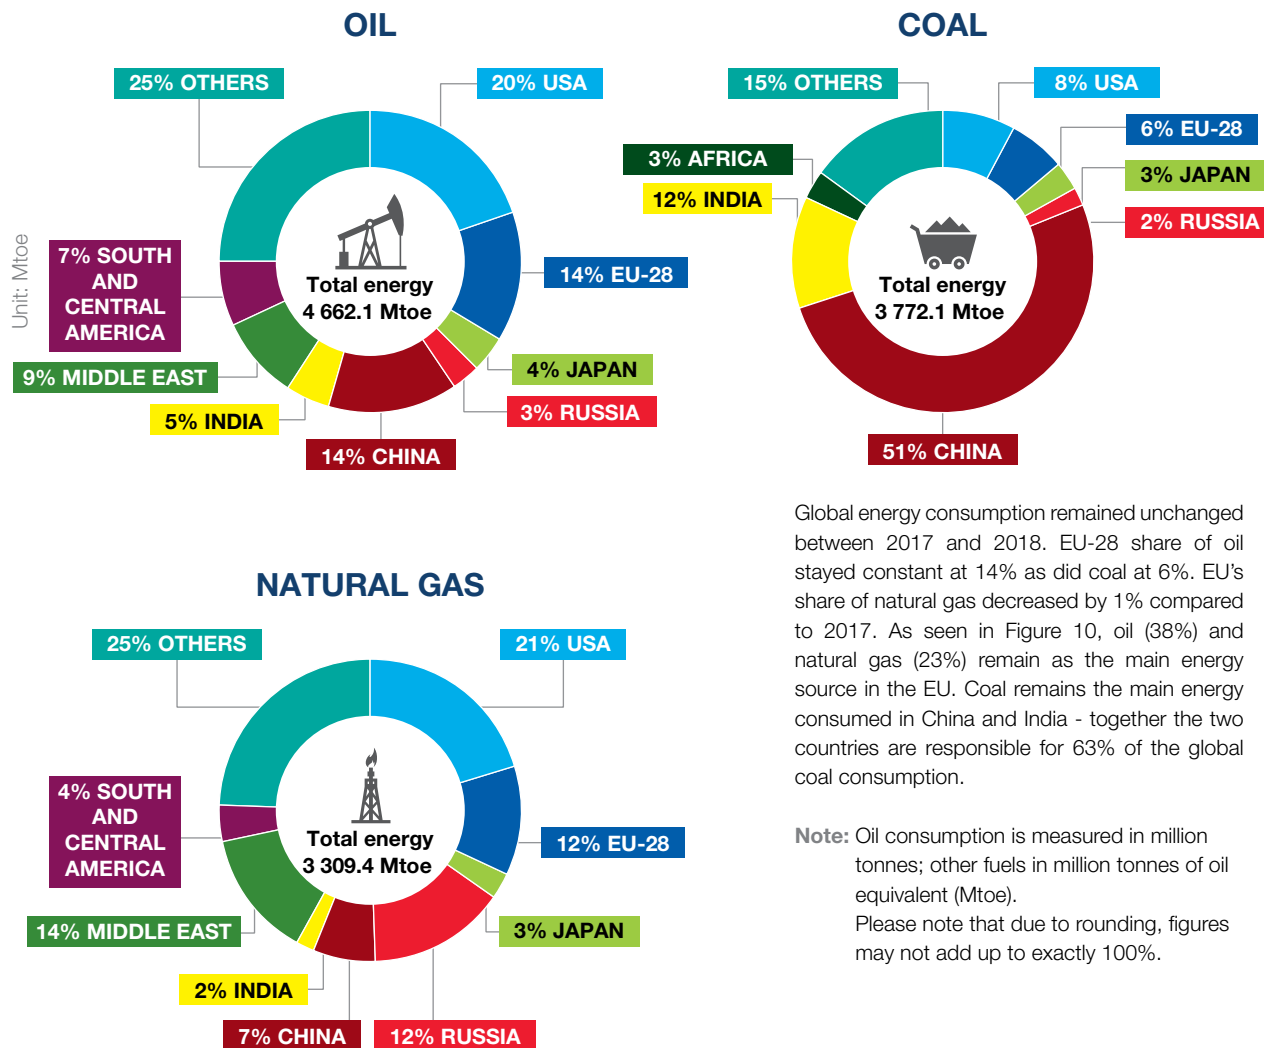

FIG.11 WORLDWIDE ENERGY CONSUMPTION BY REGION IN 2018

Source: BP Statistical Review of World Energy 2019

Global energy consumption remained unchanged between 2017 and 2018. EU-28 share of oil stayed constant at 14% as did coal at 6%. EU's share of natural gas decreased by 1% compared to 2017. As seen in Figure 10, oil (38%) and natural gas (23%) remain as the main energy source in the EU. Coal remains the main energy consumed in China and India - together the two countries are responsible for 63% of the global coal consumption.

Note: Oil consumption is measured in million tonnes; other fuels in million tonnes of oil equivalent (Mtoe). Please note that due to rounding, figures may not add up to exactly 100%.
