

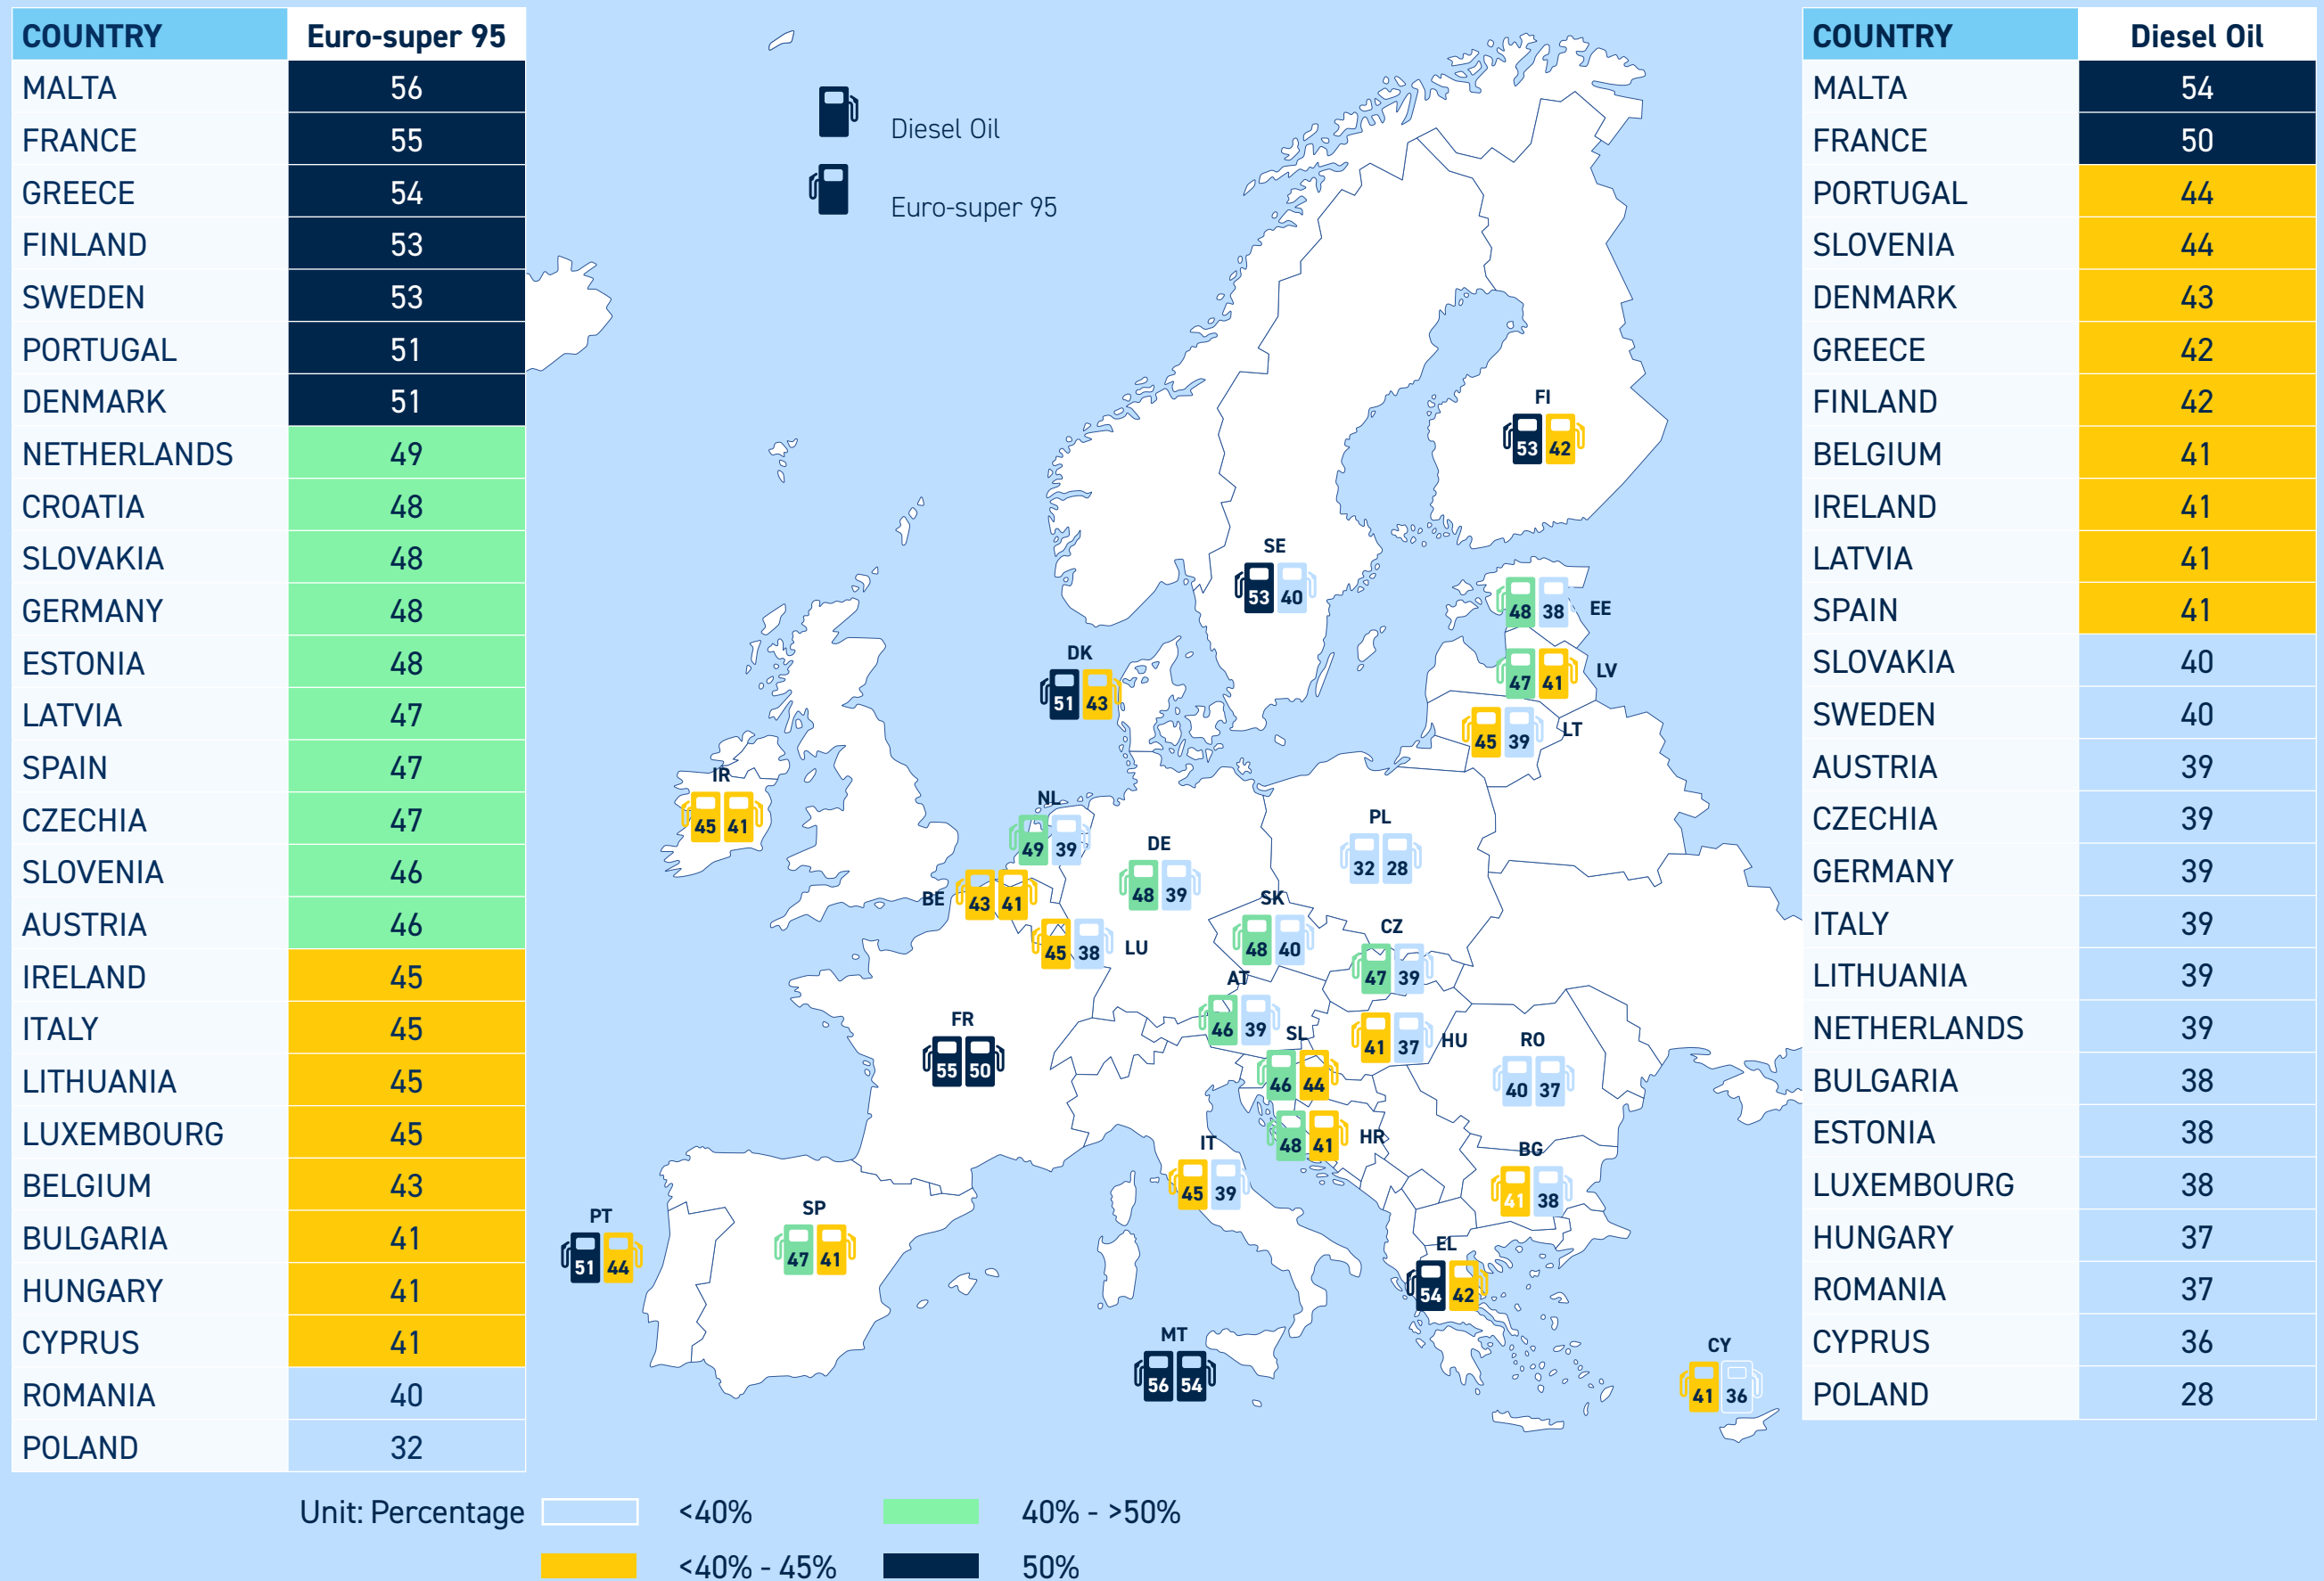

FIG.01

TOTAL TAXATION SHARE IN THE END CONSUMER PRICE

Source: European Commission

The price at the pump is driven to a large degree by tariffs and taxes and contribute substantially to Member States' revenues. On average, around half of the cost of fuel at the pump represents taxes.

The proportion of taxes is lower in 2022 than in 2021 due to surge in fuel prices following the Russian war on Ukraine, and as a result some countries have cut fuel taxes.
