

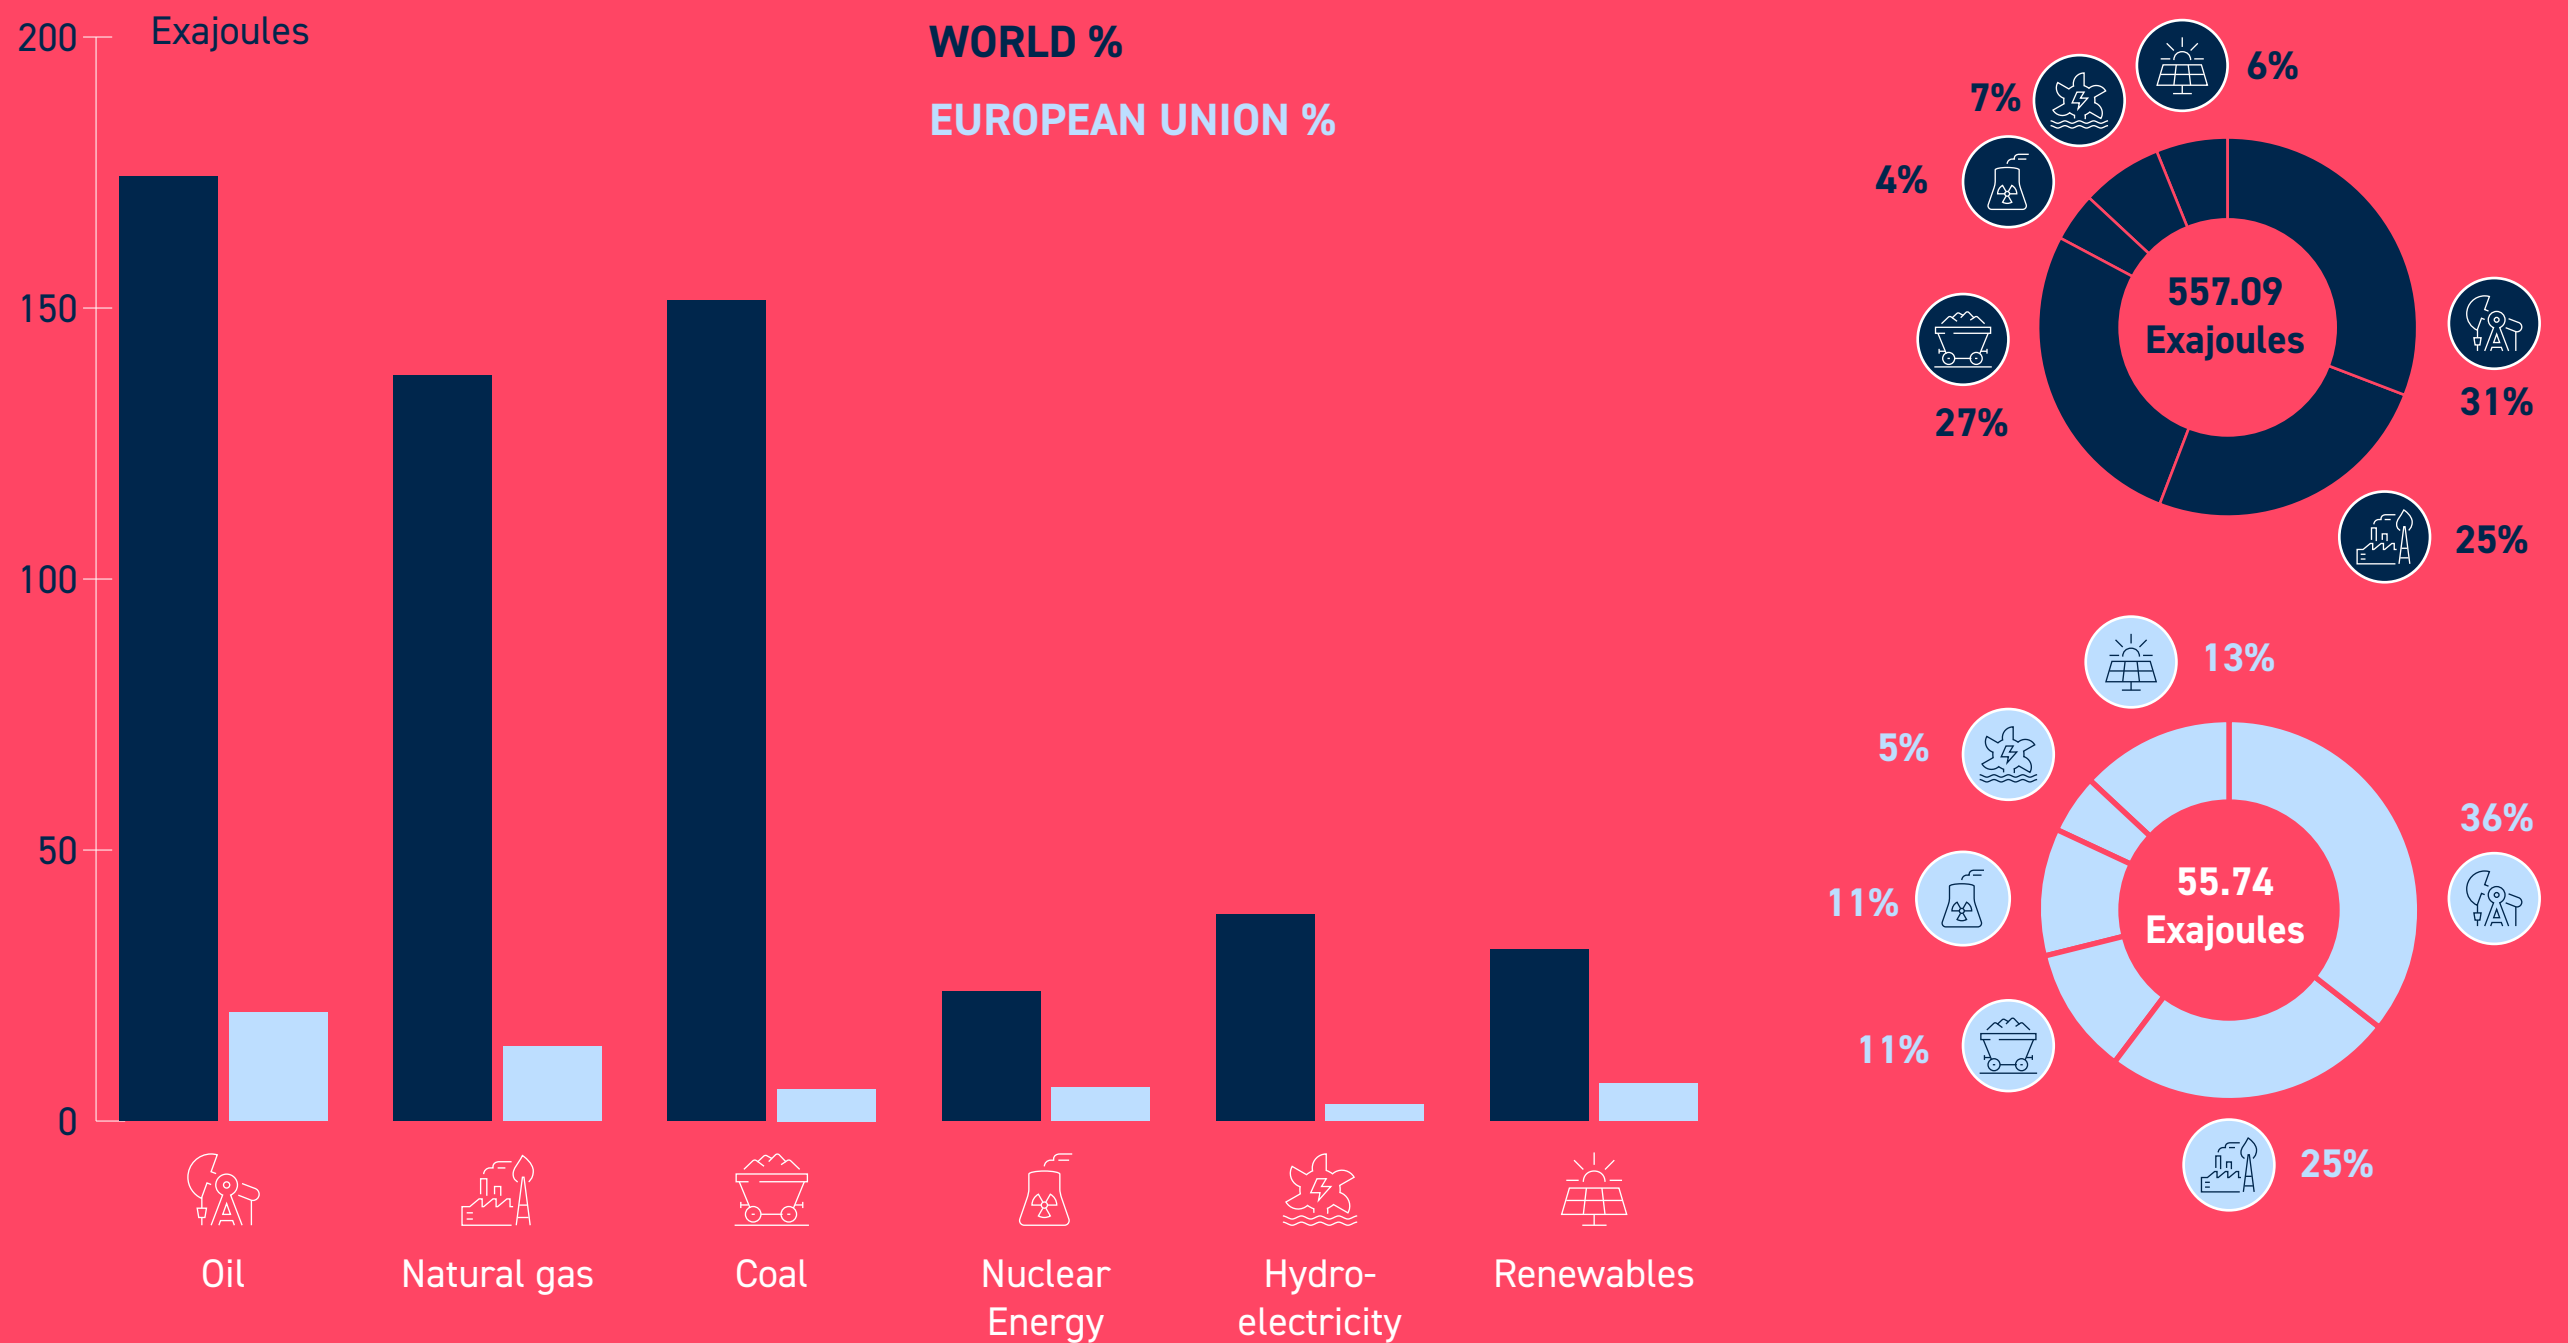

FIG.10

WORLDWIDE ENERGY CONSUMPTION BY FUEL TYPE IN 2020

Source: BP Statistical Review of World Energy 2021

Oil remains the world's dominant fuel, making up just over a third of all energy consumed. Compared to 2019, the oil market share decreased by roughly 2% due to the Covid-19 pandemic and the decrease of economic activities. Natural gas, hydroelectricity and renewables gained 1% of market share while coal remained stable.

Note: Please note that due to rounding, figures may not add up exactly to 100%.

1 Exajoule = 10^{18} J (1 billion of billions of Joules) = 23,884 Mtoe
