

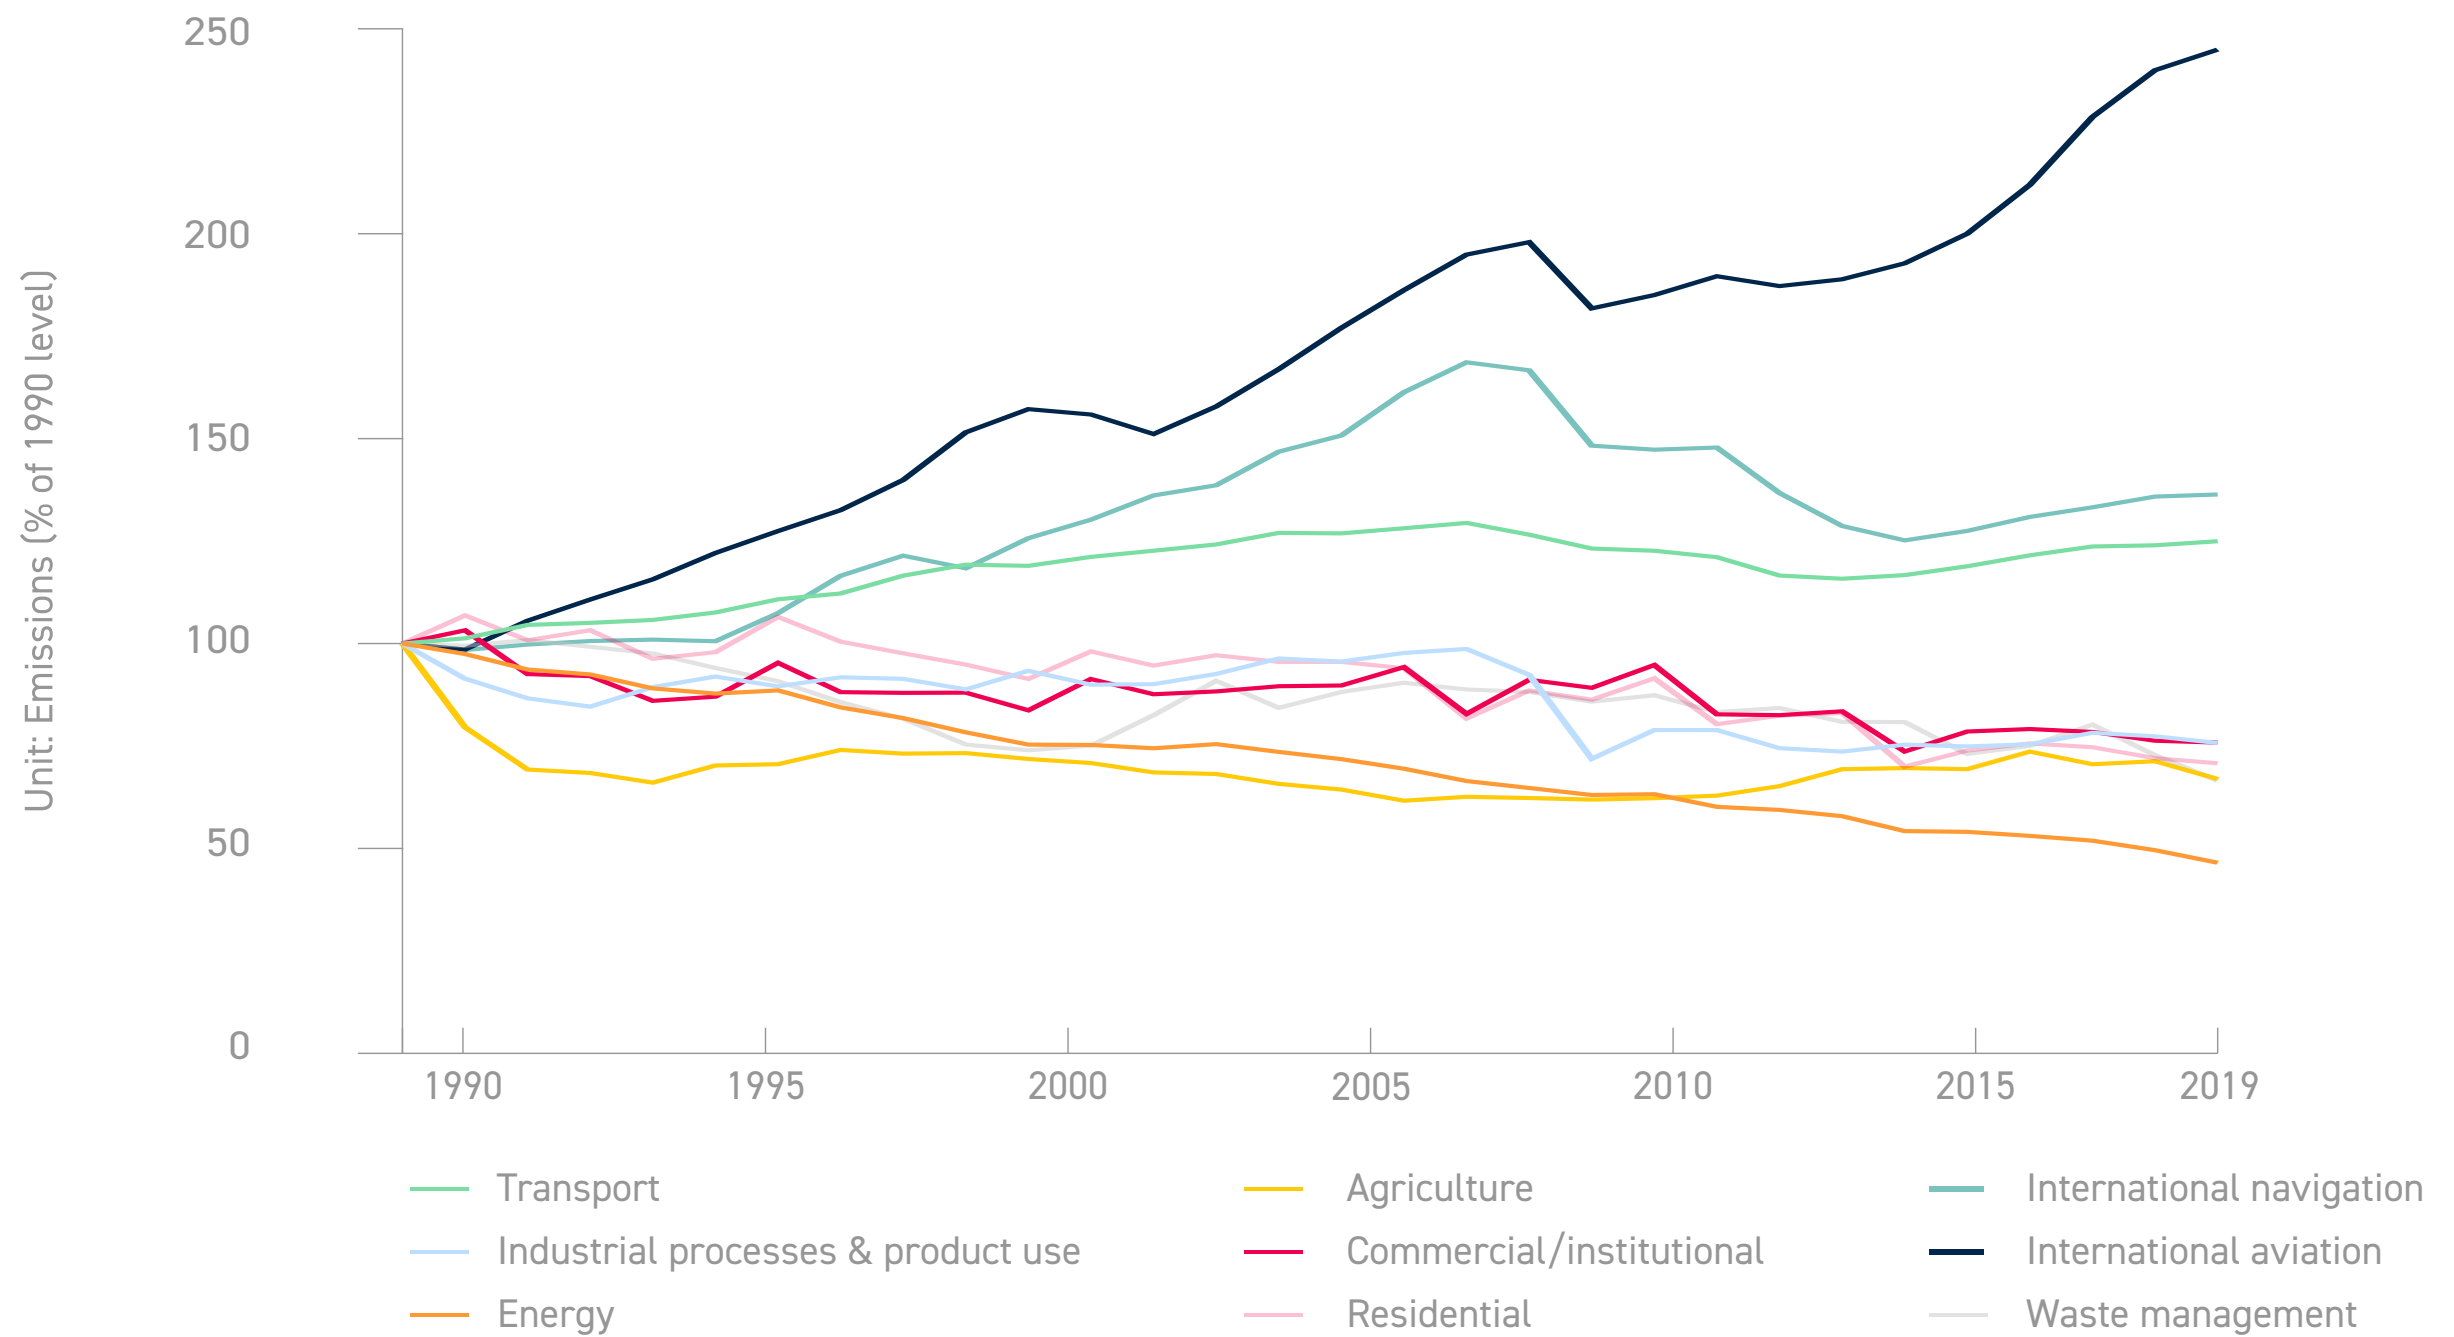

FIG.45

CO₂ EMISSION TREND BY SECTOR IN THE EU-27

Source: European Environmental Agency

CO₂ emissions per sector have generally been declining since 2007. Industry (processes and manufacturing) CO₂ emissions decreased sharply over the period 2007-2012 and are now between 30% and 38% below the 1990 levels. CO₂ emissions from transport has been steadily decreasing between 2008 and 2015. However, since 2016 we are witnessing an increase of CO₂ emissions in transport mainly due to international aviation.
